

# Twinkal Parmar

## Senior Software Developer

Whitefield, Bengaluru, 560048 | twinkal0071@gmail.com | 8946857111 | LinkedIn/twinkal | GitHub/twinkal

### SUMMARY

Senior Software Engineer with 5+ years of experience building scalable, cloud-native microservices on Oracle Cloud Infrastructure (OCI). Skilled in Java, C++, Python, REST APIs, and distributed systems, with expertise in database migration using ZDM and Oracle GoldenGate. Delivers end-to-end features with Angular on the frontend. Proven track record of improving reliability, automating cloud operations, and optimizing performance.

### WORK EXPERIENCE

- Oracle, Senior Member of Technical Staff** 2022-09 – 2026-04 | Bangalore, India
- Optimized logical migration workflows for **Zero Downtime Migration (ZDM)** using **Java**, integrating Oracle **GoldenGate** to enable **near-zero downtime** during live database migrations and extended support for **APEX, Fusion Applications (FA), and ORDS**, improving success rates by **~30%**.
  - Developed a Java-based **microservice** using **OCI SDK** to automate **cloud resource cleanup**, reducing operational effort by **~90%** and achieving **20–25% cost savings**.
  - Implemented a **real-time analytics reporting layer** for **cloud resource usage**, improving visibility and eliminating manual log analysis.
  - Designed and executed **high-concurrency** load tests (**~5000 parallel requests**), identifying **latency** bottlenecks and improving system **performance and reliability**.
  - Built **on-demand** cloud resource **provisioning** and **lifecycle management** workflows, improving **scalability** and reducing environment setup time.
  - Built a **Python** based framework to validate end-to-end FA migration workflows, significantly reducing manual effort for **long-running (~12-hour)** processes.
  - Leveraged **prompt engineering** with **iterative refinement** to enhance **debugging** and **code analysis efficiency**, reducing turnaround time by **30–40%**.

**Tech Stack:** Java, JavaScript, OCI SDK, OraScript, Python, Oracle Cloud Infrastructure (OCI), GoldenGate, ZDMCLI, REST APIs, SQL, Linux

- Philips Innovation Campus, Software Engineer** 2020-08 – 2022-09 | Bangalore, India
- Enhanced the Angular-based frontend for **Radiation Oncology Orchestrator (ROO)**, a clinical workflow platform used in patient-critical radiation oncology environments, improving workflow efficiency and user experience for clinical teams.
  - Built and optimized **scalable UI components** using Angular, RxJS, and Redux, implementing **reactive state** management and **real-time data flows**, improving application **responsiveness** and reducing UI instability by approximately **30%**.
  - Designed modular, **reusable Angular components** within an existing UI framework, enabling end-to-end data retrieval and seamless backend integration without disrupting existing clinical workflows.
  - Integrated frontend with **REST APIs** using Swagger and Postman, ensuring consistent data binding, robust error handling, and UI stability across all application modules.

**Tech Stack:** Angular, TypeScript, RxJS, Redux, REST APIs, Swagger, Postman, Jasmine, Karma, CI/CD, Git

### EDUCATION

- **Malaviya National Institute of Technology (NIT Jaipur)**, 8.18 CGPA | Bachelor of Technology (B. Tech) in Computer Science Engineering (CSE) 2016-2020 | Jaipur, India

### SKILLS

- **Languages:** C, C++, Java, Python, TypeScript, JavaScript
- **Databases:** Oracle DB, MySQL, PostgreSQL, Redis
- **Cloud & Infrastructure:** Oracle Cloud Infrastructure (OCI), OCI Python SDK, OCI CLI, Shell Scripting
- **Backend & Distributed Systems:** Spring Boot, REST APIs, Apache Kafka, Maven
- **AI & Developer Productivity Tools:** Copilot, Cursor, Codex, ChatGPT, Claude, SelenAI, DBCTestPilot
- **Applications & Platforms:** Oracle GoldenGate, Zero Downtime Migration (ZDM), ZDMCLI, APEX, ORDS, Fusion Applications (FA)
- **Frontend:** Angular, RxJS, Redux, HTML, CSS, JSP/Servlets
- **Automation & Testing:** Selenium, Playwright, Jasmine, Karma, Python Behave (BDD), REST API Testing
- **Tools:** Git, Bitbucket, Jenkins, Postman, Swagger, cURL, SQL Developer, IntelliJ IDEA, VS Code
- **Concepts:** System Design, Low-Level Design (LLD), High-Level Design (HLD), REST API Design, Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, SOLID Principles, Agile/Scrum

### COURSE/CERTIFICATIONS

- **Claude Code in Action**  Anthropic, 2026 | **Foundations of Coding Back-End**  Microsoft, 2025 | **Introduction to Front-End Development**  Meta, 2025

### PROJECTS

- **Super Resolution and Colorization of Videos and Images**  2020, Deep learning-based convolutional neural network. [Python, OpenCV, Keras, Tensorflow]
- Additional projects available on [GitHub](#) .

### ACCOMPLISHMENT

- **Special Applause Award – Oracle:** Recognized for contributions beyond core responsibilities for cross-functional initiatives.
- **Recognition Award – Philips:** Honored for strong ownership, collaboration, and timely delivery of high-quality projects.
